

Curate customer experiences with Ushur Invisible Portal™

Deploy and update customized, secure, and easy-to-use portal experiences to facilitate self-service for customers and partners while freeing up IT teams

OVERVIEW

Invisible Portal™ facilitates recurring business tasks that depends on the exchange of information via files, photos, documents, and forms to share key, and often private, data. Business users lift the burden off of IT teams to build portal experiences that replace email and managed file transfers which are often relied on for business partner data exchange. Invisible Portal™ adds the ease and security that replaces insecure point solutions.

USE CASES

- Pension and retirement management
- Group and voluntary benefits administration
- Insurance coverage quoting
- Policy and plan maintenance

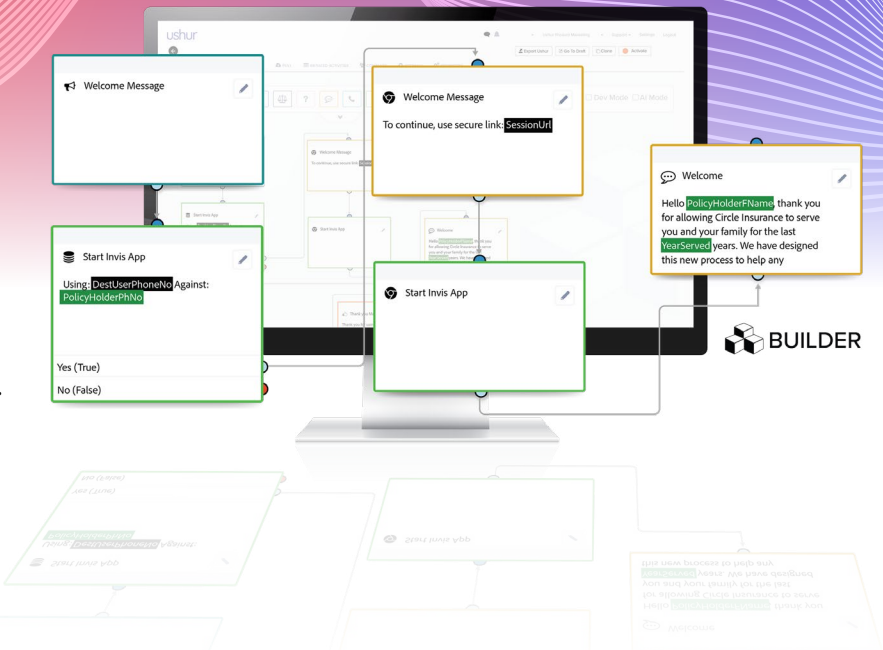

KEY CAPABILITIES

- Client portals designed and deployed with Ushur's No-Code builder
- Branded and white-labeled to each client
- Enabled for status tracking and document submission history

HOW IT WORKS

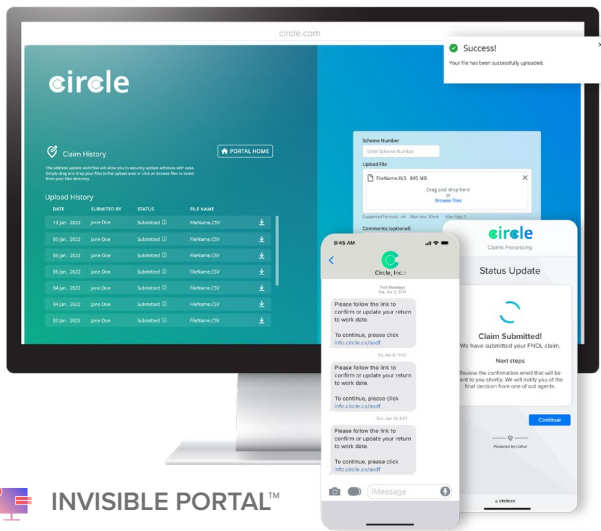

Ushur's no-code studio uses a web-based Flow Builder to build, deploy, track, and curate all intelligent automation applications. Business stakeholders can leverage the simple drag-and-drop tools to create Invisible Portal™ solutions for key customers and partners who need an organized view of automation available to them. Ushur's API-centric design helps with building each application and integrating each with core systems, CRM solutions, or other enterprise tooling.

THE INVISIBLE PORTAL™ EXPERIENCE

Elevate critical customer, member, or partner experiences with portal-like applications built by nontechnical staff - complete with two-factor authentication and proper governance and security measures. Enterprises can exchange or gather documents for key transactions, or craft customer experiences for use cases like:

- B2B Pension /Retirement Contributions
- Care provider surveys
- Medication adherence
- Gaps in care/coverage management
- Claims management

INVISIBLE PORTAL™
